Emission-free.
Low-noise.
Made in Meppen.

C804e

The large fully electric wheel dumper

Bergmann. Built for you.

Made in Germany.

BERGMANN

C804e

High payload. Zero emissions.

Reliable, powerful and sustained climate-friendly: With its payload of 3.5 tons the Bergmann C804e is currently the world's largest all-wheel transporter with fully electric drive. Thanks to its compact dimensions, mobility on any terrain and its low-noise operating characteristics it is the perfect partner for work on urban construction sites. The Bergmann C804e can be operated with a driver's license class B.

Rugged design

The two solid steel frames of the C804e are extremely stable and jointed with each other by a pendulum hinged joint. Combined with all-wheel steering, a rotating driver's platform and long-life lithium iron phosphate batteries, a construction multi-talent has been created here that skillfully masters professional requirements in urban environments.

Variable equipment

The Bergmann C804e is available as bulk material and general cargo transporter with a round skip and alternatively, with a rugged three-sided tilting flatbed.

Flexible use

With a total height under two meters, the C804e is ideal for operations on compacting, restoration, or conversion construction sites. The Bergmann Dumper as agile, zero-emission and low-noise companion is also perfect for work in sensitive areas with high noise protection requirements.

C804e with round skip

Little space required on tight construction terrain

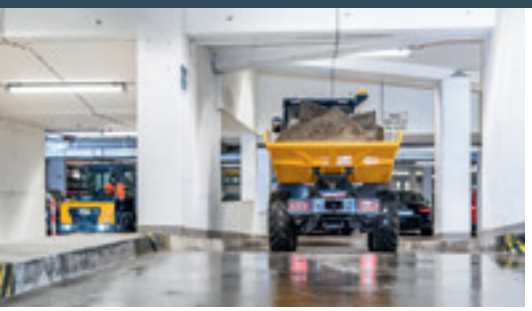
Rotating driver's platform for additional safety

C804e – Your benefits:

- 100 percent emission-free
- extremely quiet operation
- long-life Bergmann quality
- operation with class B driver's license
- compact dimensions
- low operating costs

Convincing features:

- Electric all-wheel travel drive with automotive control
- Low entry, rotating and auxiliary seat for ergonomic comfort and maximum safety
- Optionally with round skip or three-sided tilting flatbed
- Optimal tread pattern for any terrain
- Charging at the outlet, charging point or the mobile Bergmann energy store
- Lithium iron phosphate batteries with 80 Volt technology; 5,000 charging cycles guaranteed
- Available with full cabin from Dec. 2021



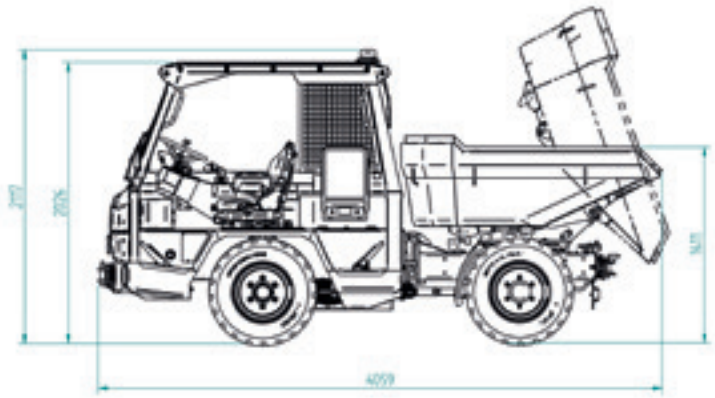
Masters low clearance passages without problem

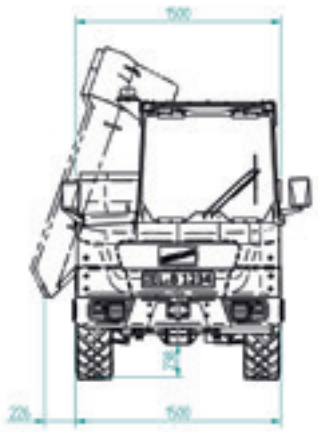
Reliable even on rugged terrain

Easy to transport

C804e
Technical specifications

Payload (tech.)	3,000 - 3,500 kg
Loading capacity (skip)	1.47 m^3
Overall length	3,950 mm
Overall width	1,486 mm
Passage clearance of rotating beacon	2,024 mm
Ground clearance	260 mm
Pouring height (skip)	580 mm
Loading height (skip)	1,411 mm
Motor power	25 kW
Empty weight	ab 2,550 kg
Travel drive motor	
Asynchronous motor	
Motor power	25 kW
Exhaust emission standard	emission-free
Vehicle battery	
Battery voltage	80 V
Lithium iron phosphate (LFP) battery module	16 kWh/24 kWh
Operating resources interface monitored with exhaustive discharge protection	
Battery heater for operation at low temperatures	





All specifications and figures non-binding. Technical changes reserved.
