

Proven in use

The construction vehicle of choice for the reinstatement of a drilling slurry pit in Geeste is the 4010 HK dumper, provided by Bergmann for the construction company J+B Küpers. During the two-year construction period, this tracked dumper with its 10 tonne tail trough is providing a valuable service, removing around 1000 tonnes of earth per day – along a 500-metre transport route.

The extensive excavation and disposal works next to the A31 in Geeste have been underway since the end of 2015. The first phase involves the removal of soil that contains embedded drilling material left over from oil and natural gas extraction works since the 1950s. A total of more than 100,000 m³ of earth needs to be removed, which equates to a giant cube with an edge length of more than 47 metres.

Bergmann 4010 HK: The powerful dumper for every terrain

Do the difficult ground conditions, J+B Küpers from Osterwalde found only one vehicle that was worth considering, as construction manager Berthold Egbers explains: "The soil is really muddy and wet, which makes the use of wheeled vehicles impossible. The 4010 HK dumper comes into its own here with its good manoeuvrability, particularly on wet ground." This is thanks to its two hydrostatic power trains with constant full

power combined with optimal weight distribution, whatever the load. After a certain initial scepticism, everyone working on the building site is now full of praise for the Bergmann dumper. "There were some colleagues who regarded the tracked dumper as a 'toy' – but will now be lost without it", explains Egbers. It seems perfectly logical that a long-term lease was requested straightaway for the low-emission 4010 HK tracked dumper, which is ideally suited to the special conditions on site.

J+B Küpers – a construction company with international experience

The choice of construction company was no coincidence either: J+B Küpers is, after all, a renowned family-run company with specialist expertise, a highly motivated team and more than 50 years of regional, national, and Europe-wide experience. Meeting the most demanding customer requests and continually growing demands is a result of the highest level of commitment, says construction manager Egbers of the Grafschaft Bentheim based company: "Our specialists can be reached around the clock and are ready to work quickly and easily, using the right kind of special vehicle, to recover, tow, remove and clear."
